PROFESSIONAL SUMMARY

Applied AI engineer building LLM, RAG, and Agentic-AI systems, working directly with the founder as part of AICE's Founder's Office. M.Tech in Computer Science (Big Data Analytics). Translate strategy from leadership meetings into shipped prototypes and clear technical content; ship applied-AI projects at AICE that are used as teaching material in its AI courses.

PROFESSIONAL EXPERIENCE

Founder's Office — Applied AI Engineer

AICE — AI Center of Excellence (Remote)

Nov 2025 – Present | Full-time | Reporting directly to the Founder

- Work directly with the Founder as part of the Founder's Office — attend leadership and strategy meetings, capture decisions and action items, and translate them into shipped AI systems, content, and operational outcomes.
- Drive applied AI execution: research and evaluate emerging models, frameworks, and tools (LLMs, RAG, Agentic AI, MCP) to identify what is genuinely production-ready vs experimental, and convert findings into working prototypes that inform founder-level decisions.
- Built 5 applied-AI projects at AICE spanning RAG systems, MCP servers, code-analysis tools, and LLM playgrounds; three (SkySense AI, Git-Sense, DocSense) are used as teaching material in AICE's AI courses.
- Brief the Founder on AI build-vs-buy and architecture decisions — e.g., model selection across Groq-hosted Llama 3 / Mixtral, vector-DB choice (ChromaDB vs Qdrant), and MCP integration patterns — turning research into concise written and visual reports.
- Author technical content and structured learning material — explainers, deep-dives, and tutorials on LLMs, RAG, Agentic AI, evaluation methods, and prompt engineering — aimed at applied practitioners.
- Run AICE's daily AI-news content across Instagram, LinkedIn, X, Facebook, and YouTube — using ChatGPT for content creation, Gemini and Claude for carousel preparation, and Perplexity / Comet for engagement and growth analysis.
- Use modern AI tooling (Claude, ChatGPT, Gemini, Gamma, Canva, etc.) extensively in production workflows for content creation, research synthesis, and rapid prototyping.

Video Annotation Specialist — Nexority (Remote, Contract) Oct 2025 – Nov 2025

- Annotated large-scale video and vision datasets for AI/ML training pipelines; conducted QA audits, identified annotation gaps and edge cases, and supported model evaluation with bias/fairness awareness.

TECHNICAL SKILLS

Programming & AI/ML: Python, JavaScript/TypeScript, Node.js, Machine Learning, Deep Learning, NLP, Computer Vision, LangChain, T5, YOLO, OpenCV, TensorFlow

LLMs & Frameworks: Llama 3 (70B), Mixtral, Gemma via Groq; HuggingFace embeddings, ChromaDB, Qdrant, MCP (Model Context Protocol), FastAPI, Streamlit, Gradio

Data & Analytics: SQL (MySQL), MongoDB, BigQuery, Tableau, Matplotlib, ELK Stack

Cloud & Infra: AWS, GCP, Azure, Cloudflare Tunnel, Razorpay (payments)

Frontend: React, Vite, Tailwind CSS, Lucide, React Markdown

AI Tools (daily use): Claude (chat, Cowork, Claude Code), ChatGPT, Gemini, Cursor, Gamma, Canva, Notion, Perplexity, n8n, ElevenLabs + others

AICE PROJECTS

SkySense AI — Agentic Flight Search & Booking [\[GitHub\]](#) — MCP, Node.js, TypeScript, React, Groq (Llama 3), Amadeus, SerpAPI, Razorpay

End-to-end agentic flight assistant: MCP server exposing flight search to Claude Desktop, extended into a full-stack app with multi-provider search, seat-map selection, and Razorpay payments with strict tool-use guardrails. Used as MCP teaching material in AICE's AI courses.

Git-Sense — AI-Powered Repository Analyzer [\[GitHub\]](#) — FastAPI, React, ChromaDB, LangChain, Groq

RAG-based code analysis tool that ingests any public GitHub repo, runs automated audits (security, refactoring, architecture), auto-generates READMEs, and pushes generated artifacts back to the source repo. Used as RAG teaching material in AICE's AI courses.

DocSense — Local-First RAG Document Chat [\[GitHub\]](#) — *React 19, Vite, Tailwind v4, FastAPI, LangChain, Qdrant, Groq*
Private, local-first RAG app for chatting with PDF/DOCX/TXT documents — storage stays on-device, with multi-model switching (Llama 3.3 70B, Mixtral) and auto-generated question suggestions. Used as local-RAG teaching material in AICE's AI courses.

PromptSense — RAG Workbench with Evaluation Dashboard [\[GitHub\]](#) — *React, FastAPI, Groq (Llama 3 70B), Python*
RAG workbench with URL/file ingestion, real-time streaming answers, side-by-side prompt A/B testing, and an evaluation dashboard tracking cost, latency, and user feedback.

ModelSense — LLM Playground & Prompt-Engineering Lab [\[GitHub\]](#) — *React, Vite, Tailwind, Groq API*
"Mission Control" UI plus a Mini Lab for prompt engineering with real-time control over Temperature, Top-P, and model selection, multi-persona presets, JSON-mode enforcement, and browser-local API key storage.

APPLIED AI RESEARCH

MCP Connector Research — Swiggy & Zomato in Claude — *MCP, Claude, Food-delivery APIs*

- Documented end-to-end MCP connector behaviour inside Claude (lifecycle, tool discovery, auth, request routing) using Swiggy and Zomato as case studies; identified integration patterns reused for production-grade connectors at AICE.

ACADEMIC PROJECTS

- AI-Powered Welding Groove Analysis — YOLOv8-pose computer-vision system for U/V welding grooves, with CVAT-annotated datasets, weld-metric/filler-volume computation, and a Gradio interface.
- Agentic AI Question Paper Generation — Generates Bloom's-Taxonomy-aligned MCQs from PDFs (Groq + LangChain + T5 + spaCy knowledge graphs); 97% precision, 94% recall.
- AI-Based Missing Person Identification — Facial-recognition pipeline matching reference images against real-time video (TensorFlow + YOLOv8 + OpenCV) at ~95% accuracy, backed by MySQL.

EDUCATION

M.Tech — Computer Science Engineering (Big Data Analytics) *Vellore Institute of Technology, Vellore* | 2023 – 2025

B.E — Computer Science Engineering *Rajalakshmi Engineering College, Chennai* | 2019 – 2023

CERTIFICATIONS, WORKSHOPS & ACTIVITIES

- AWS Academy Cloud Foundations • IBM Project: Virtual Eye (AI Drowning Detection) • UKIERI • Texas Instruments Robotics Workshop • Advanced Drone Technology Workshop (India Space Lab).
- AICE Sales Hackathon, Hyderabad (April 2026) — Organizer; co-led planning, on-ground coordination, and supported the official launch of AICE Education and AICE Services.
